

SOLUTRANS SHOW - STAND C075 (HALL 5)

Chargepoly unveils compact charging station for electric rigid trucks

Just 6 days before the Solutrans trade show, the biennial event dedicated to road and urban transport professionals, Chargepoly presents a new ultra-fast electric charging station. Available from March 1, 2024, this powerful yet compact solution is designed to facilitate the recharging of electric rigid trucks in logistics warehouses.

Next Tuesday, the Solutrans trade show opens its doors at the Eurexpo Lyon convention and exhibition center. For four days, the major players in the transport sector will be showcasing their latest technological innovations. Among the exhibitors at this 2023 event is Chargepoly, a specialist in ultra-fast electric charging solutions. The Aix-based company will be unveiling a brand-new charging station for straight trucks and heavy goods vehicles.

A unique solution on the market

The new bollard presented by Chargepoly can be installed on a wide range of structural elements: walls, posts in parking lots, gantries, shades... for example, in warehouses where space is at a premium. Fixed between two loading bays (photo), this small bollard (800 mm high x 300 mm wide x 240 mm thick) is an ideal solution for recharging electric trucks during loading and unloading operations in logistics warehouses. Another advantage is that it's quick and easy to install, and particularly well-suited to environments where it's technically impossible or expensive to dig up the ground. It makes maneuvering easier for drivers, minimizes the risk of collisions and perfectly meets on-site safety requirements. Available from March 1, 2024, this new terminal delivers power of up to 400 kW.

“This new, more compact charging station is a response to the operating constraints of logistics service providers and hauliers. Thanks to it, we can now offer them a unique solution on the market for quickly and easily recharging their truck fleets,” emphasizes Hadi Moussavi, President, and Founder of Chargepoly.

About Chargepoly

Created in 2019 by its President-Founder Hadi Moussavi, Chargepoly is a French-Tech industrial company whose mission is to accelerate the electrification of transport through innovation. The company designs, builds and operates a new generation of fast charging infrastructures for the most

demanding markets, such as logistics, public transport and public mega-hubs. Adapted to intensive use, its multi-patented technology integrates its customers' performance challenges, users' need for fluidity and energy supply constraints, with a high level of reliability and scalability. Chargepoly offers tailor-made solutions for turnkey IRVE projects, including the sale of equipment and licenses, as well as a wide range of services up to and including station operation.

Chargepoly has already supplied major electric truck manufacturers and road hauliers and has deployed public hubs in Clermont-Ferrand and Aix-en-Provence. The company has signed a framework agreement with a global supply chain leader to equip its European depots. Its ambition is to expand in Europe and North America. Chargepoly won a prize in the "mobility" category at CES in Las Vegas in 2022 and was a finalist in the INPI awards. Its partners include the Vedecom Institute, the Sprint Project and AVERE France. Headquartered at the Technopôle de l'Environnement in Aix-en-Provence, the company currently employs over twenty engineers and sales staff in France and the USA (Seattle).
