

TSG and Chargepoly join forces to provide state-of-the-art charging solutions for Volvo Trucks customers

Specialists in electric charging solutions for transport and logistics, TSG and Chargepoly have sealed a strategic partnership to meet the needs of Volvo Trucks customers.

TSG, a Volvo Trucks referenced partner since 2023, is a European leader in the installation and maintenance of charging infrastructures. TSG supports companies at every stage of their electric mobility projects. With over 39,000 charging points installed across Europe, TSG Charge has proven its expertise and know-how.

For its part, Chargepoly is an international engineering and technology company that has developed a complete recharging offer for electric trucks. For several years now, it has been successfully deploying its hardware and software solutions in logistics hubs for the electrification of ZFE collection-distribution and delivery operations. Its DC fast-charging station, 100% designed and manufactured in France, has been qualified by the Volvo Group.

By combining their skills, TSG and Chargepoly offer a turnkey solution perfectly suited to electric transport fleets, including design, installation, maintenance, digital services and infrastructure financing. Thanks to this partnership, Volvo Trucks customers will benefit from free studies including a technical visit, a quote submitted within a month, and the assurance of controlled lead times.

Financially, the two companies will also support Volvo Trucks customers in obtaining available public subsidies, including a 130 million euro aid package for the acquisition of electric trucks, the terms of which for 2024 are currently being finalized, as well as the Advenir program for subsidizing depot recharging infrastructures. Volvo Trucks customers will be able to pay their recharging costs in full monthly over a period of up to 72 months by leasing their station (partnership with BNP Paribas).

“This collaboration offers our customers a comprehensive and proven solution to optimize their Total Cost of Ownership (TCO). What's more, we're proud to be participating with the Volvo Group in the development of the new technologies industry in France,” says Thomas VANQUAETHEN, Deputy Managing Director of Chargepoly.

Laurent DANHYER, Business Manager Electric Mobility TSG France, adds: “By joining forces with this partnership, we can accelerate the development of charging infrastructures and promote sustainable solutions for the future of our Volvo Trucks customers.”

“We are convinced that this partnership with TSG and Chargepoly will play a key role in strengthening our position in the electric truck market and contribute to achieving our customers' sustainability goals. We remain committed to being at the forefront of innovation in the electric transport sector,” concludes Thomas GAY, Charging Offer Manager at Volvo Trucks.

About Chargepoly

Chargepoly is an international technology and engineering company, expert in recharging heavy-duty electric vehicles. The company has developed a complete range of charging systems for freight and passenger transport, designed to optimize the total cost of ownership of fleets. The company has total mastery of its technologies (hardware and software), and its products have been tried and tested by leading European truck manufacturers. Chargepoly is actively expanding in Europe (head office in Aix-en-Provence, France) and North America (head office in Seattle, USA). Its majority shareholder is Voltalia, an international player in renewable energies and service provider across the entire value chain, with a presence in over 20 countries, 2.9 GW in operation or under construction, and 16.1 GW of projects under development.
